**FP 50**

**PORTABLE PROFESSIONAL SEQUENTIAL COMPRESSION THERAPY**

**BASE UNIT**

**FP 50 LEG SLEEVE 6 SECTORS**

**FP 50 ARM SLEEVE**

## **EQUIPMENT AND ITS ACCESSORIES**

<b>Base Unit</b>	<b>050UB</b>
<b>Leg sleeve (5 sectors) Left</b>	<b>050G5L</b>
<b>Leg sleeve (5 sectors) Right</b>	<b>050G5R</b>
<b>Foot sleeve Left</b>	<b>000PNTL</b>
<b>Foot sleeve Right</b>	<b>000PNTR</b>
<b>Arm sleeve (6 sectors)</b>	<b>050B6</b>
<b>Abdominal strip (2 sectors)</b>	<b>000FA2</b>
<b>Professional Duplication Set</b>	<b>050SD6</b>
<b>Extensor (used to increase the circular size of the leg sleeve)</b>	<b>000EST</b>

## **USE AND INSTRUCTION**

The Fisiopress FP 50 device is indicated in venous (venous insufficiency and its consequences) and lymphatic pathologies, and in all forms of edema and stagnation of liquids of the lower and upper limbs, where the progressive and effective drainage, performed by the appliance and its garments, restores the natural water exchange. The device therefore favors the venous and lymphatic return, and it is also particularly suitable for post traumatic edemas, venous edemas, ulcers, and in the post-operative course after ligation of the perforators or stripping of the saphenous vein. Portable, simple and robust, it combines the concept of a "professional" system with that of an "easily transportable": it can therefore be used both in an outpatient setting and at the patient's home, becoming, for example, an ideal partner for the physiotherapist who can easily use it after lymphatic drainage, even at home. Being a medical product CE marked should be used on prescription and indication of the doctor: effectiveness of the equipment and related treatments is highly dependent on the use correctness.

In professional application, simple guidelines are available for proper use of the device, which, correlated to a good knowledge of the method, allow to obtain best results that this method can offer. It is always recommended to use the sequential compression therapy within an integrated therapeutic protocol.

## TECHNICAL FEATURES

- ) Distal-proximal pressure gradient sequential compression therapy.
- ) Portable-professional system, equipped with 6 sequential outputs, capable to treat one or two limbs simultaneously.
- ) Furthermore, it is possible to connect a pair of leg sleeves to the abdominal strip at the same time.
- ) Pressure range: 0 - 160 mm of Hg. on a garment.
- ) Operating cycle: 30 seconds.
- ) DASC system (distribution to communicating sectors): this internal system, specific Fisiopress, allows to have an always homogeneous pressure in all the chambers as fill with air, thus allowing the terminals to adapt to the geometry of the treated limb and uniformly compress it without danger of stagnation or reverse flows.
- ) Programmable electronic timer.
- ) Automatic shutdown at the end of therapy in the decompressive phase.
- ) Garments available for the lower limb: separate leg and foot (6 sectors) sleeve for a better fit and adaptation to the length of the treated limb.
- ) Abdominal strip (2 sectors)
- ) Extensor to increase the circular dimension of the garment.
- ) Terminals available for upper limb: arm sleeve (6 sectors).
- ) All terminals have parallel and partially overlapped internal sectors.
- ) Possibility of individual replacement of each internal pneumatic bag.
- ) Full hand-sewn garments.
- ) Medical CE mark
